## PROJECTS

**DEALHUNTS — Product Comparison & Local Shop Discovery**

*Java, Spring Boot, React.js, MySQL, JPA/Hibernate, JWT, Cloudinary, mapping technologies*

- Developed a full-stack platform combining online product comparison with local-shop inventory discovery and separate Admin, Vendor, and User dashboards.
- Built REST APIs for products, vendors, inventory, categories, and brands, implementing JWT authentication and role-based access control.
- Integrated map-based shop-location visualization and location lookup to support local-shop discovery.
- Integrated Cloudinary for product-image uploads and management.

**VISENTRA — AI Vision & Perception Pipeline**

*Python, PyTorch, RF-DETR, CondLaneNet, Depth Anything V2, OpenCV, NumPy*

- Developing a multi-model computer-vision pipeline for vehicle detection and lane-boundary visualization from camera frames.
- Isolated model dependencies in dedicated Python environments and implemented worker-based inference with latest-frame handling.
- Depth-estimation accuracy remains to be validated against known real-world distances.

## INTERNSHIP EXPERIENCE

**Cybersecurity Intern — THIRANEX** *May 2026 – Jun 2026*

- Built and tested a spam/phishing email detector to identify suspicious email patterns using machine-learning and data-analysis techniques.
